

IMEDCO Pass-Thru Waveguide

There are occasions when certain hospital and research MRI sites have patients or subjects that must remain on critical meds or anesthesia during scanning. This Pass Thru IV Waveguide design will accommodate up to 4 IV lines. The lines can be set in IMEDCO's maze concept waveguide without risk of damage. Since the bladder seal retracts every time the door is unlocked, this will permit convenient access to the waveguide any time the door is open. This design can be incorporated into our Pneumatic Seal RF door design.
